

System requirements

sync•gw is fully written in PHP. Your web server should provide the following PHP configuration:

- At minimum PHP version [7.1.1](#)
- At minimum [8 MB](#) memory
- PHP extension [DOM_XML](#) need to be disabled
- PHP extension [GD](#) must be enabled
- If you want to down or upload data from "Administrator Interface", PHP extension [ZIP](#) need to be enabled
- If you want to synchronize multi-byte language date, you need to enable PHP extension [Multi byte extension](#)
- If you want to use native language support, you need to enable PHP extension [Gettext](#)
- If you want to use a MySQL server database, you need to enable [MySQLi](#) extension

You may download a small PHP script to check the system requirements from our [download section](#).
